

Concentration of the first-round vote by département (CENP)

CENP within each election. CENP depends on the number of candidates (16 in 2002, 12 in 2022); figure 2 compares the elections with HHI.

CENP = $(K - \text{ENP}) / (K - 1)$, a supplementary normalised measure. Mean CENP = unweighted mean across départements. Both maps use the same colour scale.
Sources: Ministère de l'Intérieur (first-round results), INSEE (population, surface). 96 metropolitan départements.
